Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1240 is discounted by 25%. What is its sale price?

02. A vehicle travels 312 km in 4 hours. What is its average speed?

03. Why might an order service place fulfillment work on a queue?

04. What is eventual consistency?

05. How would you explain a decision you made with incomplete information?

Amazon - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1240 is discounted by 25%. What is its sale price?

INR 930. The discount is 1240 x 25/100 = 310; subtract it from the original price.

02. A vehicle travels 312 km in 4 hours. What is its average speed?

78 km/h. Average speed = distance / time = 312 / 4.

03. Why might an order service place fulfillment work on a queue?

A queue decouples request handling from slower processing and absorbs traffic bursts. Consumers must still handle retries and duplicates safely.

04. What is eventual consistency?

Replicas may briefly disagree after a write, but converge if no new updates occur. The application must account for temporarily stale reads.

05. How would you explain a decision you made with incomplete information?

State the goal, known evidence, uncertainty, reversible options, decision and how you checked the outcome.
