Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1320 is discounted by 15%. What is its sale price?

02. A vehicle travels 252 km in 3 hours. What is its average speed?

03. How would you return the top k frequent words from a large list?

04. Why does binary search require an ordered search space?

05. How would you clarify an ambiguous problem before coding?

Google - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1320 is discounted by 15%. What is its sale price?

INR 1122. The discount is 1320 x 15/100 = 198; subtract it from the original price.

02. A vehicle travels 252 km in 3 hours. What is its average speed?

84 km/h. Average speed = distance / time = 252 / 3.

03. How would you return the top k frequent words from a large list?

Count frequencies with a hash map, then maintain a size-k heap or sort the distinct words. Define a tie-break rule for equal frequencies.

04. Why does binary search require an ordered search space?

Each comparison must safely eliminate one side of the remaining range. Ordering provides that guarantee.

05. How would you clarify an ambiguous problem before coding?

Ask about inputs, constraints, edge cases, expected output and success criteria; then confirm the approach with a small example.
