Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 920 is discounted by 25%. What is its sale price?

02. A vehicle travels 108 km in 2 hours. What is its average speed?

03. What is a deadlock, and name one way to prevent it?

04. How do TCP and UDP differ?

05. What should an incident handover include?

HCL - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 920 is discounted by 25%. What is its sale price?

INR 690. The discount is 920 x 25/100 = 230; subtract it from the original price.

02. A vehicle travels 108 km in 2 hours. What is its average speed?

54 km/h. Average speed = distance / time = 108 / 2.

03. What is a deadlock, and name one way to prevent it?

Deadlock occurs when tasks wait indefinitely for resources held by each other. A consistent lock acquisition order can remove circular waiting.

04. How do TCP and UDP differ?

TCP provides an ordered, reliable byte stream with connection management. UDP sends independent datagrams without guaranteeing delivery or order.

05. What should an incident handover include?

Impact, timeline, evidence, actions taken, current status, known risks and the owner of the next action.
