Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1200 is discounted by 20%. What is its sale price?

02. A vehicle travels 225 km in 3 hours. What is its average speed?

03. How would you find the shortest number of connections between two users in an unweighted graph?

04. What trade-off does denormalizing a frequently read feed introduce?

05. How would you measure whether a new feature improved the user experience?

Meta - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1200 is discounted by 20%. What is its sale price?

INR 960. The discount is 1200 x 20/100 = 240; subtract it from the original price.

02. A vehicle travels 225 km in 3 hours. What is its average speed?

75 km/h. Average speed = distance / time = 225 / 3.

03. How would you find the shortest number of connections between two users in an unweighted graph?

Use breadth-first search and track visited nodes. BFS explores nodes in increasing edge-distance order.

04. What trade-off does denormalizing a frequently read feed introduce?

It can make reads faster but increases duplicate data and the work required to keep updates consistent.

05. How would you measure whether a new feature improved the user experience?

Define a user-centered metric and guardrails, compare against a baseline or controlled experiment and check for unintended effects.
