Netflix

Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1280 is discounted by 10%. What is its sale price?

02. A vehicle travels 162 km in 2 hours. What is its average speed?

03. How does a content delivery network help video playback?

04. What is a circuit breaker in a service architecture?

05. Why does adaptive video streaming change quality during playback?

Netflix - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1280 is discounted by 10%. What is its sale price?

INR 1152. The discount is 1280 x 10/100 = 128; subtract it from the original price.

02. A vehicle travels 162 km in 2 hours. What is its average speed?

81 km/h. Average speed = distance / time = 162 / 2.

03. How does a content delivery network help video playback?

It places content closer to viewers, which can reduce origin load and delivery latency.

04. What is a circuit breaker in a service architecture?

It temporarily stops calls to a repeatedly failing dependency, allowing controlled recovery and preventing cascading failures.

05. Why does adaptive video streaming change quality during playback?

It adjusts bitrate to estimated network capacity and buffer conditions to reduce interruptions while using available bandwidth.
