Reliance

Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 960 is discounted by 10%. What is its sale price?

02. A vehicle travels 171 km in 3 hours. What is its average speed?

03. Why might a product catalogue use a cache?

04. Explain horizontal scaling.

05. How would you keep a stock update consistent with a purchase?

Reliance - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 960 is discounted by 10%. What is its sale price?

INR 864. The discount is 960 x 10/100 = 96; subtract it from the original price.

02. A vehicle travels 171 km in 3 hours. What is its average speed?

57 km/h. Average speed = distance / time = 171 / 3.

03. Why might a product catalogue use a cache?

To reduce latency and database load for frequently read products. Invalidation or expiry is needed to keep cached values sufficiently fresh.

04. Explain horizontal scaling.

Add more application instances and distribute traffic across them. Shared state and database capacity must also be considered.

05. How would you keep a stock update consistent with a purchase?

Use a transaction or atomic conditional update so stock cannot fall below zero, and make retries idempotent.
