Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 800 is discounted by 10%. What is its sale price?

02. A vehicle travels 90 km in 2 hours. What is its average speed?

03. How would you find the second-largest distinct number in an array in one pass?

04. What is the difference between a primary key and a foreign key?

05. A client changes a requirement near a deadline. How would you respond?

TCS - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 800 is discounted by 10%. What is its sale price?

INR 720. The discount is 800 x 10/100 = 80; subtract it from the original price.

02. A vehicle travels 90 km in 2 hours. What is its average speed?

45 km/h. Average speed = distance / time = 90 / 2.

03. How would you find the second-largest distinct number in an array in one pass?

Track the largest and second-largest distinct values while scanning. Ignore duplicates. This uses O(n) time and O(1) extra space.

04. What is the difference between a primary key and a foreign key?

A primary key uniquely identifies a row. A foreign key references a key in another table and enforces referential integrity.

05. A client changes a requirement near a deadline. How would you respond?

Clarify the change, assess impact, agree on priorities and document a revised plan with the team and client.
