Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1160 is discounted by 15%. What is its sale price?

02. A vehicle travels 144 km in 2 hours. What is its average speed?

03. How can a database transaction protect a ledger entry?

04. What is the difference between authentication and authorization?

05. How would you display delayed market data responsibly?

Zerodha - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1160 is discounted by 15%. What is its sale price?

INR 986. The discount is 1160 x 15/100 = 174; subtract it from the original price.

02. A vehicle travels 144 km in 2 hours. What is its average speed?

72 km/h. Average speed = distance / time = 144 / 2.

03. How can a database transaction protect a ledger entry?

It can ensure related records are committed together or all rolled back, avoiding a partially recorded operation.

04. What is the difference between authentication and authorization?

Authentication establishes who the user is. Authorization determines which actions or resources that identity may access.

05. How would you display delayed market data responsibly?

Show the timestamp and delayed status prominently, avoid implying that the data is live, and handle stale data explicitly.
