Mock model question paper

Original sample material for demonstration and self-practice. Not an official company paper, an authentic previous-year paper or a statement of the company's hiring process.

Suggested time: 25 minutes | 5 questions | Self-practice

01. An item priced at INR 1080 is discounted by 25%. What is its sale price?

02. A vehicle travels 198 km in 3 hours. What is its average speed?

03. How can you efficiently search restaurants by city and cuisine?

04. What is pagination, and why does it help an order list?

05. How would you design fair handling for a failed payment on an order?

Zomato - Answer guide

MOCK MATERIAL / Suggested answers for self-review

01. An item priced at INR 1080 is discounted by 25%. What is its sale price?

INR 810. The discount is 1080 x 25/100 = 270; subtract it from the original price.

02. A vehicle travels 198 km in 3 hours. What is its average speed?

66 km/h. Average speed = distance / time = 198 / 3.

03. How can you efficiently search restaurants by city and cuisine?

Use indexes aligned to the filter patterns, such as a composite index on city and cuisine, and check the query plan with representative data.

04. What is pagination, and why does it help an order list?

Pagination retrieves a bounded portion of a result set, reducing response size, memory use and rendering work.

05. How would you design fair handling for a failed payment on an order?

Track payment and order states, use idempotent callbacks, reconcile uncertain results and communicate the status clearly to the customer.
